

Develop a Leadership Plan

Become a Great Leader

By Lane Sloan

There are literally millions of leadership books. Many are how to books. Others are scholarly insights into leadership best practices. This is one of those rare combinations.

It marries leadership concepts within a strategic planning framework. The result is a leadership plan that helps guide you on the pathway to becoming a great leader. The practical approach provided interweaves leadership insights that are crucial in improving your leadership capability into your actual work environment. It is short, concise, and easy to read with me acting as your mentor.

There are many new ways of thinking about leadership. Foremost is the idea of using value propositions with all your stakeholders, particularly your employees and working team. That is how you get people to follow you, which is what leadership is all about. The focus is not on achieving a personal ranking against other leaders but rather on achieving great results.

Great leaders produce great results. Achieving those results is substantially facilitated by having a leadership plan that leverages your core competencies and applies directly to taking action on the job. The action targets fulfilling these value propositions for your various stakeholders. Great results come from synergizing the strength of your working team, energizing their engagement, and continuously learning from one another to fulfill these value propositions.
